

Emissioni del pattern 5_S0

Emissioni del pattern 5_S0

The chromatogram displays a red line representing the consumption volume over time. The x-axis represents time in minutes, ranging from 0 to 100. The y-axis represents consumption volume in liters, ranging from 0 to 10. The baseline is at 0 L. There are several sharp peaks: a small peak at approximately 10 minutes (approx. 1.5 L), a very large peak at approximately 15 minutes (approx. 10 L), a medium peak at approximately 55 minutes (approx. 4.5 L), a small peak at approximately 60 minutes (approx. 0.5 L), a very small peak at approximately 65 minutes (approx. 0.2 L), a large peak at approximately 75 minutes (approx. 8.5 L), and a medium peak at approximately 85 minutes (approx. 5.5 L). A legend in the top right corner indicates that the red line represents the consumption volume in liters.

Time (min)	Consumption Volume (L)
10	1.5
15	10.0
55	4.5
60	0.5
65	0.2
75	8.5
85	5.5
