

The chromatogram displays two distinct peaks. The first peak, labeled 'consumption': 'VolumeMedia [L]', is a sharp, narrow peak occurring at approximately 10 minutes. The second peak, labeled 'consumption': 'VolumeMedia [L]', is a broader peak occurring at approximately 25 minutes. The x-axis represents time in minutes, ranging from 0 to 30. The y-axis represents consumption volume in liters, ranging from 0 to 10. The baseline is stable at 0 L throughout the run.

Time (min)	Consumption Volume (L)
0	0
10	10
25	5
30	0
