

The figure displays a chromatogram with a red line representing the signal. The baseline is stable at approximately 0.05 units. There are several sharp peaks of varying heights. The most prominent peak occurs around 02:55, reaching a height of approximately 0.95 units. Other significant peaks are observed at approximately 02:35, 02:45, 02:50, 03:00, 03:05, and 03:15.
